Jack Hagen

jack@hagen.rip | hagen.rip | github.com/ThisIsNotANamepng

Education

University of Wisconsin - Eau Claire (UWEC) Expected Fall 2027
Bachelors of Science in Computer Science and Political Science (Double major)
Certificates in Chinese and Transnational Asian Studies | Mark Stephen Cosby Honors College

Skills

Cyber Threat Intelligence: Honeypots, Threat Hunting, International Relations
Cybersecurity: Cryptography, Network Security, Web Application Security, Lock Picking
System Administration: Linux, Networking, Kubernetes, Docker
Computer Science: Java, Python, C, Go, Bash, Javascript, HTML, CSS, Flask, Machine Learning
Data Analytics: R, Jupyter Notebook, Pandas, Matplotlib, Numpy

Organizations

Blugold Rocketry Club: President/Founder May 2026 - Present
Cybersecurity Club: President/Founder October 2024 - Present
Model United Nations: Competition Director/Founder May 2024 - Present
Student Association for Computing Machinery: President January 2025 - Present
Humane Intelligence: Researcher October 2024 - January 2026

Experience

High Performance Computing Student Administrator, UWEC Blugold Center for HPC – Eau Claire, WI
May 2024 – Present

- Manage two supercomputing clusters of close to 100 Linux machines by using industry standards, including Slurm and GNU utilities.
- Assist university researchers and students across disciplines utilize supercomputing resources in research projects through one-on-one trainings and lecture-style workshops.

Student Researcher, UWEC – Eau Claire, WI September 2023 – Present

- Conduct experiments as part of the Artificial Intelligence and Machine Learning in Security research group.
- Write academic papers for projects within political science.

Information Technology Commission Director, UWEC Student Senate – Eau Claire, WI May 2025 – Present

- Sit on the university student senate as a voting member, voting and voicing opinions on legislation.
- Direct the Information Technology Commission (ITC), hearing reports from the IT department and library directors.
- Lead projects such as the tech innovation budget and annual tech survey.

Projects

Stultus Search Engine github.com/ThisIsNotANamepng/search_engine

- An independent search index made from crawling and tokenizing millions of sites into a searchable format.
- A local cluster of 13 servers clustered together with Kubernetes working in tandem with a high-performance postgresql database.
- Presented at the Chippewa Valley Dev Group Code Camp conference

Real-Time WiFi Signal Triangulation Network github.com/Blugold-Group/TriangulationNet

- A network of ESP32s which tracked the unique WiFi signals of campus food delivery robots, triangulating the locations of the robots in real-time.

- Used to prove that the robots drive in circles all day to school administration.

Menoa menoa.org
- A Linux-first antivirus with real-time threat intelligence pulled from open source feeds and managed by me.

Bletchley github.com/Blugold-Group/bletchley
- A cryptographic suite for encryption, decryption, and cryptanalysis.
- Meant to be a self-contained software with minimal dependencies and robust support for Linux pipes and cross-utilities scripting.
- Specializes in automatic decryption for use in capture the flag cybersecurity competitions, including a local machine learning model for cipher detection.

Competititons

Conference on Applied Machine Learning and Information Security www.camlis.org
AI Red Teaming Participant and Researcher
- Won an online Large Language Model hacking competition with 500 participants to earn a place on a 30-person research team at the Conference on Applied Machine Learning and Information Security.
- Worked on a team of researchers summarizing the findings of the event into a report to inform future federal policy regarding AI security. Resulting paper was shelved by the Trump administration before public release.
- Funded by the National Institute of Standards in Technology (NIST) as party of NIST and the Cybersecurity and Infrastructure Security Agency's (CISA) Assessing Risks and Impacts of AI program.

HackMIT Winner hackmit.org
- Part of a four-person team which built a web application for anonymous but verified communication using email verification on confidential computing hardware using Trusted Execution Environments, enabling authenticated anonymity.
- Won first out of 250 teams at the Massachusetts Institute of Technology in a vendor challenge.

Cyphercon Winner cyphercon.com
- Beat out teams from the industry and large technical universities through a series of challenges in lock picking, WiFi security, Bluetooth security, and cryptography.
- Led a team which won first out of 100 teams at Cyphercon, Wisconsin's largest cybersecurity conference.
